

Mini-CCS-Charger-Tester

Tester for charging tests with pass/fail results. Test of EVSE after production or maintenance.

Mini-CCS-Charger-Tester

Features

Test of EVSE / Charger in field application

Simple and quick test, no knowledge of standard required

Full automatic:

- ▶ EV-Simulation on communication to get EVSE charging
- ▶ EV-Simulation on DC load circuit, which fits to communication

Output of measured DC Voltage and DC Current

Output of communication progress

Output of test result (Pass / Fail) depending on charging possibility

Charger-Tester also available for CHAdeMO

comemso Mini-CCS-Charger-Tester

Comemso meets new challenges with aftersales application

Developments and aftersales services for e-mobility present new challenges for vehicle- and charging-system manufacturers. The number of EVSEs in the field increases and therefore also the efforts in the service applications. After each service of EVSEs there is a final test required, if the EVSE is still proper working to ensure that nothing has been forgotten at the service work. To test this there is either a real EV required or a small mobile automatic tester such as the comemso Mini-CCS-Charger-Tester. The benefit of a small mobile tester even increases on a service for multi-charger-systems, where CCS and CHAdeMO have to be tested at the same service activity. The Mini-CCS-Charger-Tester can be used at the service application, maintenance and at the production as a simple end-of-line test.

Technical Data

Input Power:	100..240V AC
Weight:	ca. 6 kg
Size (W x D x H):	36 x 30 x 23 cm

Supporting versions:	DIN 70121, ISO 15118
User Interface:	PC software with graphical user interface
Required PC interface:	1x USB, 1x Ethernet
